# How to Create your First Azure Deployed Web App

**Assumption: You have logged in already to your MSAzure account and have set-up the account already.**

1.) Go to App Services

2.) In the App Services, click CREATE (see image below)

3.) The CREATE WEB APP form will display at the right pane.

     **Under Subscription -> Resource Group**, click CREAT NEW and write **Lastname_MyAzure** for the resource group.

     Under Instance Details, in the NAME section, write **lastname-my-first-azure-deployed-app** as the name (or URL) for your first app.

     In the RUNTIME STACK section, use the language of the web app that you plan to deploy.

     Click NEXT until you reach the last page or **REVIEW + CREATE** to go to the last page right away.

4.) Wait for the deployment process to be complete. This page will eventually display.

Click **GO TO RESOURCE.**

5.) This page will display, after you click GO TO RESOURCE.

	The URL of your app is found in this page. Take note, the name that you specify the in the Name field of the Instance Details section is what appears here.

	Copy this URL and paste it in the comment section of the post in the wall.
